

DAMRC Summer Greetings

Before the holidays, DAMRC sends this summer greeting to the readers of DAMRC newsletter with the wish for a pleasant summer.

On May 22th- one of hottest days during the spring- the DAMRC Technology Center opened with representation from 7 different countries.

The Minister of Defense, Nicolai Wammen performed the official inauguration and during his speech at the ceremony, he welcomed the result of a joint venture back in 2010, which he, as mayor of the municipality of Aarhus, was a part of, too. *"We now have a technology center that provides Danish metal companies the possibilities to streamline and develop in cooperation with foreign companies,"* he continued, *"DAMRC will bring development, growth and jobs"*. He pointed out the importance of focusing on the synergy between knowledge and production and the new facilities of DAMRC have space for project work, production, research and education. The Minister stressed the fact that the new educational facility in the Technology Center gives students the opportunity to acquire and develop new knowledge in an environment close to the physical materials and machines.

DAMRC would like to thank the many attendees who helped celebrating this special day and for the many fine presents received at the inauguration of the technology center.

During the first half of 2014, DAMRC has experienced something best described as an explosion in the number of new members. Since the turn of the year, there has been a growth of 50% in numbers of members. In the next newsletter, we will give a more detailed presentation of the resent new members.

With the new facilities, DAMRC has even more opportunities to transfer and develop new knowledge and technology. At present, DAMRC offers following courses:

- 11. Sep. Routing Optimization (machine dynamics)
- 22.-23. Oct. Machining of difficult materials

Other interesting courses are under development; see more details on our website. From week 30, you will be able to find an updated program for DAMRC courses at <http://damrc.dk>

DAMRC will be staffed to a limited extent in week 30-31, but it will be possible to get in touch with the office at +45 21545054

Kind regards,
Klaus Bonde Ørskov
Director, DAMRC
